ABHISHEK KUMAR

📍 New Delhi, India | 📧 abkprajapati.39@gmail.com | 📞 8789977380

PROFESSIONAL SUMMARY

Python Developer with 2+ years of experience designing and implementing AI/ML-driven applications, LLM-based solutions, and scalable microservices. Proficient in FastAPI, Django, data science, predictive analytics, and recommendation systems. Hands-on expertise in building intelligent applications with LLMs, RAG-based architectures, vector databases, deep learning, and computer vision.

TECHNICAL SKILLS

- Languages & Frontend: Python, HTML, CSS, JavaScript (basic).
- Backend & Frameworks: FastAPI, Django, Microservices, JWT Authentication.
- Databases: MySQL, SQLite, MongoDB, Vector DBs (FAISS, MongoDB Atlas Search).
- AI/ML & LLMs: Pandas, NumPy, HuggingFace, MCP, Temporal, TensorFlow, Scikit-Learn,
- Tools & Platforms: Git, GitLab, Postman, VS Code, Langchain, Langraph.

Core Skill and Expertise

LLM Applications & AI Integration

- Designed and implemented RAG pipelines with vector databases for document retrieval and contextual responses.
- Integrated GPT-4, LLaMA, and open-source LLMs into production-grade systems for conversational AI and automated decision-making, leveraging RLHF to fine-tune responses for higher accuracy, relevance, and user alignment.
- Developed scalable multi-agent AI architectures for task orchestration, knowledge retrieval, memory management, and temporal analytics for workflow orchestration and operational optimization.
- Built LLM-powered applications transforming unstructured data into structured, actionable insights.
- Implemented embedding pipelines with HuggingFace and LangChain/LangGraph for context-aware conversations and dynamic prompt engineering.

Machine Learning & Predictive Analytics

- Preprocessed and engineered features on structured and unstructured datasets to optimize model performance.
- Applied geospatial analytics on location-based data (e.g., taxi/mobility datasets). Also I implemented RL.
- Built predictive models using time-series forecasting, regression, classification, and clustering for actionable insights.
- Developed recommendation systems combining content-based, collaborative filtering, and deep learning approaches.
- Deployed ML pipelines and evaluation frameworks using Python, Pandas, NumPy, Scikit-Learn, and TensorFlow.

Backend & API Development

- Designed and developed scalable backend architectures with modular microservices for AI/ML applications.
- Built APIs using FastAPI and Django with ORM integration for relational databases (MySQL, SQLite).
- Implemented authentication and authorization (JWT, RBAC) to secure users and system resources.
- Optimized database queries, indexing, and vector search pipelines for fast and reliable data retrieval.
- Integrated workflow orchestration, background jobs, third-party APIs, and external services to streamline operations and enhance application functionality.

Professional Experience

Tec-orb Technologies Pvt. Ltd. | Noida, India

Python Developer | LLM Engineer | Data Science & Machine Learning

Oct 2023 – Present

- Designed and deployed LLM-driven AI applications and RAG pipelines for enterprise data automation.
- Built multi-agent AI architectures, embedding pipelines, and vector-based knowledge retrieval systems.
- Implemented enhanced RAG systems using RLHF to optimize retrieval accuracy and contextual relevance.
- Developed predictive ML models, recommendation engines, geospatial analytics, and reinforcement learning solutions for demand forecasting and operational optimization.
- Created scalable backend services and APIs using FastAPI and Django, with JWT/RBAC security and workflow orchestration.

Chetu India Pvt Ltd. | Noida, India

Python Developer Intern

May 2023 – July 2023

- Developed a data analysis web app performing EDA and visualization for actionable insights.
- Gained hands-on experience with Python, SQL, HTML, CSS, and JavaScript.

***Key Projects*:**

- Viainow (AI Voice Platform) – Voice AI Agent platform enabling businesses to create automated AI calling agents, manage leads, configure prompts and knowledge bases, and integrate with calendars. https://viainow.com/
- Fliz (Rental Platform AI Chatbot) – AI chatbot for a vehicle and equipment rental platform to assist users with bookings, order tracking, and accessing detailed information about vehicles and equipment. https://dev.fliz.com.sa/
- Office AI Projects – General AI Solutions – Deployed multiple AI/ML solutions including LLM-based chatbots, reinforcement learning models, recommendation engines, and demand forecasting tools. https://tensors.shop/projects
- Office AI Projects – Teacher AI Agent – FastAPI-based AI learning platform with intelligent teaching agents, role-based authentication, adaptive learning, and real-time student performance analytics. https://tecorb.in/Teacher_AI_Agent/

EDUCATION

Master of Computer Application (MCA) – *AKTU University* (2026)
Bachelor of Computer Application (BCA) – *CCS University* (2023)
Intermediate – *BSEB Board* (2017)
Matriculation – *BSEB Board* (2015)

CERTIFICATIONS & RELEVANT COURSEWORK

- TensorFlow Developer Course – Udemy
- Coursework: OOP, Web Development with Python, DBMS, Software Engineering, DSA

ACADEMIC PROJECTS

- Built a console application to fetch physical state, boiling point, and atomic weight of periodic table elements.

  Food Recipe Web Application (*HTML, CSS, JavaScript*)
- Created a web app that generates food recipes based on user input using an external food API.

ACHIEVEMENTS

Led a major college project as **team leader**.
Recognized for completing a **minor project ahead of schedule**.
